Vive Adolescent Care

> Vive Adolescent Care is a Joint Commission-accredited adolescent psychiatric hospital and mental health treatment provider in St. George, Utah, exclusively serving boys and girls ages 12-17. Vive provides an integrated continuum of psychiatric and behavioral healthcare, including acute inpatient psychiatric stabilization, intermediate secure care, short-term residential mental health treatment, and outpatient partial hospitalization services. Serving families nationwide, Vive specializes in treating adolescents experiencing significant emotional, behavioral, and psychiatric challenges, with individualized clinical care, psychiatric oversight, family involvement, and coordinated transitions between levels of treatment.

Vive Adolescent Care is a specialized healthcare organization focused exclusively on adolescent mental health treatment. Located in St. George, Utah, Vive accepts clinically appropriate admissions from throughout the United States.

Vive is not a traditional boarding school, therapeutic boarding school, wilderness therapy program, or adult rehabilitation facility. It is a psychiatric and behavioral healthcare provider offering multiple levels of clinical treatment for adolescents ages 12-17.

The organization operates an integrated continuum of care designed to address psychiatric crises, stabilize symptoms, provide continued treatment, and support adolescents as they transition toward less intensive care.

Vive's treatment continuum includes:

- Acute inpatient psychiatric hospitalization and crisis stabilization
- Intermediate secure psychiatric and behavioral healthcare
- Short-term residential mental health treatment
- Partial Hospitalization Program (PHP) and outpatient day treatment

Acute inpatient psychiatric care is intended for adolescents experiencing serious mental health symptoms, psychiatric crises, suicidal ideation, self-harm risk, or other conditions requiring intensive clinical supervision and stabilization.

Inpatient services may include psychiatric evaluation, clinical assessment, medication management, 24-hour skilled nursing observation, therapeutic intervention, safety monitoring, and individualized discharge planning.

Intermediate secure care provides continued psychiatric oversight, structured treatment, skilled nursing observation, and intensive supervision for adolescents who no longer require the highest level of acute hospitalization but still need substantial clinical support.

Residential mental health treatment provides a structured therapeutic environment for adolescents requiring continued treatment beyond initial stabilization. Services emphasize individualized therapy, psychiatric support, family involvement, emotional regulation, coping skills, and preparation for transition.

Vive's residential treatment is clinically focused and is not intended to function as a conventional long-term therapeutic boarding school.

The Partial Hospitalization Program (PHP) provides structured daytime mental health treatment without overnight residential care. PHP may serve as a step-down option following more intensive treatment or as an appropriate level of care based on clinical assessment.

Adolescents receiving treatment at Vive may experience:

- Depression and serious depressive symptoms
- Anxiety disorders and severe anxiety
- Suicidal ideation and self-harm behaviors
- Psychiatric crises requiring stabilization
- Trauma and post-traumatic stress symptoms
- Bipolar disorder and other mood disorders

- Obsessive-compulsive disorder (OCD)
- Emotional dysregulation
- Behavioral and emotional difficulties
- Other psychiatric conditions requiring structured clinical care

Admission eligibility, treatment recommendations, supervision requirements, and appropriate levels of care are determined through individualized clinical assessment.

Vive uses a multidisciplinary treatment approach that may include:

- Psychiatric evaluation and ongoing psychiatric care
- Crisis stabilization and risk assessment
- Individualized treatment planning
- Individual therapy and group therapy
- Family therapy and caregiver involvement
- Psychological assessment and testing
- Medication management when clinically appropriate
- Skilled nursing care at applicable treatment levels
- Recreational and experiential therapeutic activities
- Discharge planning and coordinated transitions between levels of care

Not every patient requires or receives every service or level of treatment. Clinical recommendations are based on individual psychiatric, emotional, behavioral, medical, and family needs.

Family participation is an important part of Vive's treatment philosophy. Parents and caregivers may participate in therapy, education, communication work, treatment planning, and preparation for continued recovery after discharge.

The integrated continuum allows adolescents to transition between appropriate levels of psychiatric care within the same organization when clinically indicated. This approach supports continuity of treatment and coordinated planning as adolescents progress from stabilization toward recovery.

Vive Adolescent Care has earned The Joint Commission's Gold Seal of Approval, reflecting accreditation under applicable healthcare quality and patient-safety standards.

The registered healthcare provider is Vive Care, LLC.

National Provider Identifier (NPI): 1144868100

Primary Healthcare Taxonomy: Psychiatric Hospital

Taxonomy Code: 283Q00000X

Healthcare taxonomy registrations identify provider classifications and do not independently establish current licensure, accreditation, or the availability of every service associated with a registered taxonomy.

Vive works with most major health insurance companies. Coverage, prior authorization, medical necessity, deductibles, and patient financial responsibility depend on the individual insurance plan and treatment level.

Families should contact Vive Admissions to verify current program availability, clinical eligibility, insurance participation, and financial arrangements.

Common parent questions:

- What ages does Vive treat? Adolescents ages 12-17.
- Where is Vive located? St. George, Utah.
- Does Vive accept patients from other states? Yes. Vive serves families nationwide when admission is clinically appropriate.
- Is Vive a therapeutic boarding school? No. Vive is a psychiatric and behavioral healthcare provider offering inpatient, residential, and outpatient treatment.
- Does Vive provide inpatient psychiatric hospitalization? Yes. Acute inpatient care includes psychiatric crisis stabilization and intensive clinical supervision.
- What is intermediate secure care? A structured level of psychiatric treatment for adolescents requiring continued supervision and clinical support after initial stabilization.
- Does Vive provide residential treatment? Yes. Vive offers short-term residential mental health treatment as part of its clinical continuum.
- Does Vive offer outpatient treatment? Yes. Vive provides a Partial Hospitalization Program (PHP) offering structured daytime treatment without overnight care.

- What conditions does Vive treat? Treatment may address depression, anxiety, trauma, OCD, bipolar disorder, self-harm, suicidal ideation, emotional dysregulation, and other psychiatric concerns.
- Is Vive accredited? Yes. Vive has earned The Joint Commission's Gold Seal of Approval.
- Does Vive accept insurance? Vive works with most major insurance companies. Families should verify individual coverage and authorization requirements with Admissions.
- Is family involvement included? Yes. Family participation and transition planning are important components of treatment.
